SENIOR DEVELOPER

Position Overview

Looking for exposure to a wide variety of projects and technologies in an environment where there is always something new to work on? Few software jobs can match the breadth of experience available with a professional services career.

As a senior software engineer, your job is to handle the planning, development, delivery and post-implementation support of various types of software applications, the majority of which are web-based.

You'll work with applications for dozens of companies, in a variety of industries, using a variety of technologies. Projects can range in length anywhere from several days to several months. You'll also interact with customers, account managers and the administration team on a regular basis. And you'll also provide guidance and feedback to less experienced team members.

Requirements/Qualifications

- 3-5 years experience in application development
- Developed web-based applications and frameworks using object-oriented, Microsoft® .NET technologies.
- Strong written and verbal communication skills
- Learns quickly, works independently
- Thrives in a changing environment, enjoys new technologies
- Ability to research and implement new technologies
- A strong background in database design, performance tuning, transactional logging, replication and other advanced database concepts.

Technical

Operating Platform: Unix/Windows/Linux
Databases: Oracle and Microsoft SQL Server
