SENIOR LINUX SYSTEMS ADMINISTRATOR

Position Overview

This position will provide server, infrastructure, and applications support as an integral part of our NOC Operations team. This position will assume primary responsibility for data center network infrastructure and security management in a mixed platform environment.

Responsibilities

- Routine System Admin functions to deploy and maintain customer facing and infrastructure servers, with a continuing focus on standardization of administration for server farms at data centers.
- Design, document, manage, and optimize network infrastructure
- Design and develop deployment automation tools for software deployments and upgrades.
- Perform regular data center security audits and remediation of deficiencies.
- Configure and manage performance monitoring tools and notification services.
- Design, configure and tune high availability Linux systems.
- Undertake various housekeeping and reporting functions for the areas of responsibility, including product deployments, upgrades & maintenance.
- Ability to take part in scheduled on-call rotations for 24-7 response to site outages and emergencies.
- Compose and edit documentation of process, procedures, and reference information.
- Assist in implementing, executing, maintaining, and documenting proper back-up and recovery procedures.
- Maintain the patch levels of all OS and application patches on all systems.
- Support third party applications on products used in support of corporate mission critical systems.
