## SENIOR NETWORK ENGINEER

### Position Overview

The Senior Network Engineer is responsible for designing, implementing, and supporting small to midsize network environments for customers (Lan/WAN, data, VOIP, and wireless). Candidates should be well versed in routing, switching, VOIP, and firewall technologies with at least 7-10 years of strong Cisco experience with complex networking environments. This is a senior network engineering position and hands-on technical skills are required.

### Requirements/Qualifications

- Possess a minimum of two Cisco certifications, including a current CCNA and/or CCDA
- Experience designing, configuring, installing, integrating, maintaining, and troubleshooting of LAN/WAN networks and systems.
- Packet level troubleshooting experience with tcpdump and Wireshark
- Experience implementing, configuring and troubleshooting EIGRP, BGP4, and static routing
- Experience implementing, configuring and troubleshooting firewalled environments based upon the Pix, ASA, and other industry leading firewalls.
- Experience implementing, configuring and troubleshooting Cisco Voice over IP technologies
- Strong interpersonal and communication skills
- Independent problem solving skills with the ability to assume leadership in high pressure situations
- Strong documentation and/or technical writing skills
- Research, evaluate, and recommend new tools and technologies for converged data/voice/video network vendor products
- Support sales staff by defining and presenting solutions to customers
